

Salaheldin Ashraf Abdou

Full-Stack Software Engineer

Egypt | +20 1203025003 | [salahabdou99@gmail.com] | LinkedIn Profile | Github | Portfolio

Full-Stack Software Engineer with 2+ years of experience building enterprise web platforms, automation systems, and large-scale content solutions using React, Python, Django/FastAPI, SQL, AEM, and Azure. Strong ownership across architecture, backend services, frontend implementation, testing, security readiness, integrations, and client-facing delivery in high-stakes enterprise environments.

Technical Skills

Languages: Python, TypeScript, JavaScript, Java, Google Apps Script

Frontend: React, Next.js, Angular, Vite, Vitest, Cypress, HTML, CSS/SCSS

Backend: FastAPI, Django, Node.js, Express.js, Flask, SQLAlchemy, REST APIs

Databases: PostgreSQL, SQL Server, MySQL, MongoDB

Cloud & DevOps: Azure, Azure Blob Storage, SharePoint, AWS, Docker, Git, CI/CD, Linux

Enterprise Platforms: Adobe Experience Manager, Microsoft Entra ID, Microsoft Power Platform

AI / ML: GenAI APIs, Machine Learning, TensorFlow, Keras, Scikit-learn, NumPy

Experience

PwC ETIC

Aug 2024 – Present

Full-Stack Associate Software Engineer

- **Enterprise Document Automation Platform:** Architected and implemented a production-bound document automation and project management platform using React, FastAPI, PostgreSQL, SQLAlchemy, MSAL, and SharePoint/Azure storage, pending final penetration testing and security remediation before release.
- Designed a modular monolith architecture covering projects, entities, shareholders, transactions, templates, dynamic JSON forms, role-based access control, project privacy, and document generation workflows.
- Built a decision-tree engine that evaluates questionnaire responses, entity data, and shareholder data to determine which Word document templates should be generated for each transaction using docxtemplater.
- Led frontend modernization by migrating a CRA-based company boilerplate to Vite mid-project, preserving internal theming standards while improving maintainability and developer experience.
- Implemented Vitest unit tests and Cypress E2E tests independently, reaching 80% branch coverage while supporting Veracode scanning, penetration testing remediation, and production security readiness.
- **National Investment Management Platform:** Developed and maintained AEM components and services for the Ministry of Investment of Saudi Arabia, supporting a large-scale AEM Cloud Service ecosystem with React SPA integration.
- Collaborated with AEM and frontend teams to deliver and test 100+ reusable components across 8 localized languages and 16k+ content pages, supporting a strict dev-test-UAT-stage-prod release pipeline and early beta release.
- Owned X/Twitter integration and contributed QueryBuilder APIs, Groovy scripts, localization workflows, content optimization, scheduled jobs, and enterprise content lifecycle automation.
- **Legacy System Modernization:** Led backend delivery for modernization of a Streamlit and Excel storage-based maintenance planning tool into a scalable Django + React platform with SQL Server, improving data management, permissions, usability, and extensibility.
- Acted as backend point of contact with the client, translating requirements into technical designs, aligning implementation with backend developers, distributing tasks, and integrating a machine learning model for route planning.
- **Enterprise Workflow Migration:** Played a key role in EMEA exploration and early implementation phase for firm-wide migration of Google Apps Script automations to Microsoft 365 tooling, identifying migration patterns across Power Automate, Office Scripts, Power Apps, and VSTO while improving logging and error handling.

PwC ETIC

Apr 2024 – Aug 2024

Full-Stack Intern

- Upskilled in and built an AEM-based e-commerce proof of concept demonstrating enterprise CMS architecture, reusable component design patterns, and content authoring workflows.
- Collaborated on a governmental project management proof of concept by developing React and Next.js UI components aligned with production Figma designs and integrated Jira APIs to serve as the backend by communicating through a Node.js proxy layer, enabling structured backend communication and controlled API access.
- Integrated a Gemini-powered chatbot with project-aware context injection, enabling intelligent user assistance and supporting successful client demo validation. ““

Education

B.Sc. Computer and Communication Engineering

2022

Faculty of Engineering, Alexandria University

Certifications

IBM Full Stack Software Developer; Meta Front-End Developer; AWS Academy Cloud Foundations; AEM Professional Sites Developer; Deep Learning Specialization; Cybersecurity Fundamentals
